

Ultrasound Informed Consent

All ultrasound examinations in the offices of Reiter, Hill, Johnson and Nevin (RHJN) are performed by a certified sonographer who is employed by a contracted vendor providing this radiology service.

Studies currently offered by RHJN include basic gynecologic pelvic ultrasound, first trimester ultrascreen genetic examination and basic obstetrical ultrasound with antepartum monitoring when indicated. Ultrasound guided procedures include IUD placement and retrieval, endometrial biopsy and sonohysterograms. Often, both abdominal and transvaginal ultrasounds are performed during the same visit to ensure that the most accurate information is obtained.

The initial information provided to the patient at the time of the service or subsequent office exam by their provider is a preliminary result. Ultrasound images and reports are formally reviewed within 48 hours by a physician within the practice qualified to interpret these studies. After this review is completed, any discrepancy in initial interpretation or subsequent changes in medical management will be communicated to you by your provider.
